

Amendments to the Specification:

Please replace the Abstract with the following amended abstract;

-- Abstract

The invention relates to a sealing ring for sealing two components moving relative to each other, particularly as a rotary shaft seal or piston ring, with a radially internal or external sealing surface (2) that can be brought into contact with one of the components to form a seal against a fluid medium[.][;] ~~where, to the~~ On one side of the sealing surface (2), the sealing ring displays a pressurizing surface (8) to be pressurized by the fluid medium and, on the opposite side, a supporting surface (7) to the side of the sealing surface (2) for positioning against a groove flank of a component accommodating the sealing ring. The pressurizing surface (8) and/or the supporting surface (7) are inclined relative to the sealing surface (2) and enclose an angle of less than 90° towards it, where the ring is capable of radial compression towards a radially internal sealing surface (2), or of expansion towards a radially external sealing surface (2). ~~(Fig. 1)~~ --

Please add the following section titles to the specification at the locations noted;

At page1 line 10, please add the section heading

--Technical Field--

At page1 line 23, please add the section heading

--Background--

At page 2 line 34, please add the section heading

--Summary--

At page13 line 9, please add the section heading

--Description of the Drawings--

At page15 line 6, please add the section heading

--Detailed Description—

At page 24 line 12, please add the heading

--What is claimed is:--

Also, please change --Figure 1-- to --Figure 1a-- at the following locations in the specification;
